JOSÉ GÓMEZ

NODEJS TYPESCRIPT SOFTWARE DEVELOPER

But before start... a little bit about who I am.

Computing and I have been a match since I tried my first computer at the age of 7. I already had a clear vocation in school, so later on, I completed the intermediate and advanced degrees in web programming.
I am curious as well as self-taught since I can remember, which has served me well in trying to go one step further in all aspects of my life.

PROFESSIONAL SKILLS

- Eagerness to improve
- Determination
- Passion and attention to detail
- Creativity
- Teamwork (both for learning and mentoring)

LANGUAGES

- B1 English (ISE I) (09/2017 - 06/2018)
  - Individual and conversation classes taken between 2018 and 2022

- I'm currently working in an international company where the official language is english

WORK EXPERIENCE

NodeJS Developer

The global password | March 2018 - July 2019

Design and development of a NodeJS backend for the R&D department with socket.io and some third API's integrations.

NodeJS Developer

ProWeSe | July 2019 - October 2019

Design and development of a NodeJS backend using MongoDB with mongoose and cheerio. *I left due to non-payment of my salary.*

NodeJS Developer

Everis Centers | November 2019 - September 2021

Backend development with NodeJS and MySQL (Using ORM and raw queries) mainly. Also managing client requirements, sprint plannings, task distribution and mentoring colleagues and leading the technical team at the end (5 including me at that moment).

NodeJS Developer

Concatel - WeLocalize | September 2021 - June 2022

Backend development in an onion architecture project with NodeJS and Postgres (with ORM). Jest unit testing and e2e with supertest.

NodeJS Developer (Typescript)

Plexus tech | June 2022 - November 2023

Two different projects: NestJS Backend design and development using hexagonal architecture (with DDD) with typescript, following SOLID, typeorm (Postgres), MongoDB (aggregation pipeline). I also work using factory pattern, strategy pattern, decorator pattern, jest for unit testing and supertest for e2e. A bit of redis using Redis Json and implementing pessimist caching strategy

Typescript fullstack developer (80/20 NodeJS/React)

Qualifyze | November 2023 - Present

NestJS Backend design and development following outside-in with jest (Hexagonal + DDD) in a fast changing environment. Also, I use mutant testing with stryker to enhance the code coverage. US's leadership and coordination. MongoDB (Read layer), Postgres and DynamoDB. Events implementation using rabbitMQ and nest event bus. Daily production deployments and monitored using Datadog. Pair programming and code reviews as main tools in my daily basis
